Define Problem Statements (Customer Problem Statement Template):

A customer problem statement helps identify the challenges faced by end users and provides a clear understanding of their needs. It enables the team to focus on developing a solution that addresses real-world problems effectively. For the Credit Card Approval Prediction project, the primary users are bank credit analysts and credit card applicants. The proposed machine learning solution aims to automate the approval process, improve prediction accuracy, reduce manual effort, and provide faster decisions, resulting in a better experience for both banks and customers.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card.	Get my credit card application approved quickly	The approval process takes a long time and I don't know my eligibility	The bank manually reviews many applications.	Uncertain and frustrated.
PS-2	A bank credit analyst	Evaluate credit card applications accurately and efficiently	Reviewing every application manually is time-consuming and prone to errors	There are a large number of applications to process daily	Overloaded and stressed
