

Coding & Solution

Date	15 March 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Udayasri138/Credit-Card-Approval-Prediction
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask
Key Features Implemented	• Credit card approval prediction form • User input validation • Approval/Rejection prediction based on applicant details • Responsive web interface using HTML and CSS
Pending / Incomplete Features	• Integration of trained Machine Learning model (Scikit-learn/XGBoost) • Database connectivity • User authentication and cloud deployment
Setup / Run Instructions	1. Install Python 3.12 or above. 2. Install Flask using pip install flask. 3. Open the project folder in VS Code. 4. Run python app.py. 5. Open http://127.0.0.1:5000/ in a web browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	yes
2	Meaningful variable and function names are used	yes
3	Code includes comments / documentation where necessary	yes
4	Error handling is implemented for critical operations	yes
5	The application runs without critical errors	yes
6	Code is committed to a version control repository	yes

Additional Notes / Comments:

The project provides a web-based Credit Card Approval Prediction application developed using Python and the Flask framework. Users can enter applicant information through a simple web interface and receive an approval or rejection prediction. The project is maintained in a GitHub repository and follows a modular project structure, making it easy to extend with a trained machine learning model, database integration, and cloud deployment in future iterations.
