

Performance Testing

Date	15 March 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Performance Testing

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman, Web Browser
Type of Testing	Functional Performance Testing
Target Module / API	Flask Application (/ and /predict)
Test Environment	Local System (Windows, Python 3.12, Flask)
Test Date	15 July 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Open Home Page	1	10	Home page loads successfully
2	Submit valid applicant details	1	15	Prediction result displayed
3	Submit different applicant values	1	15	Correct approval/rejection displayed
4	Refresh and test again	1	10	Application continues to respond normally

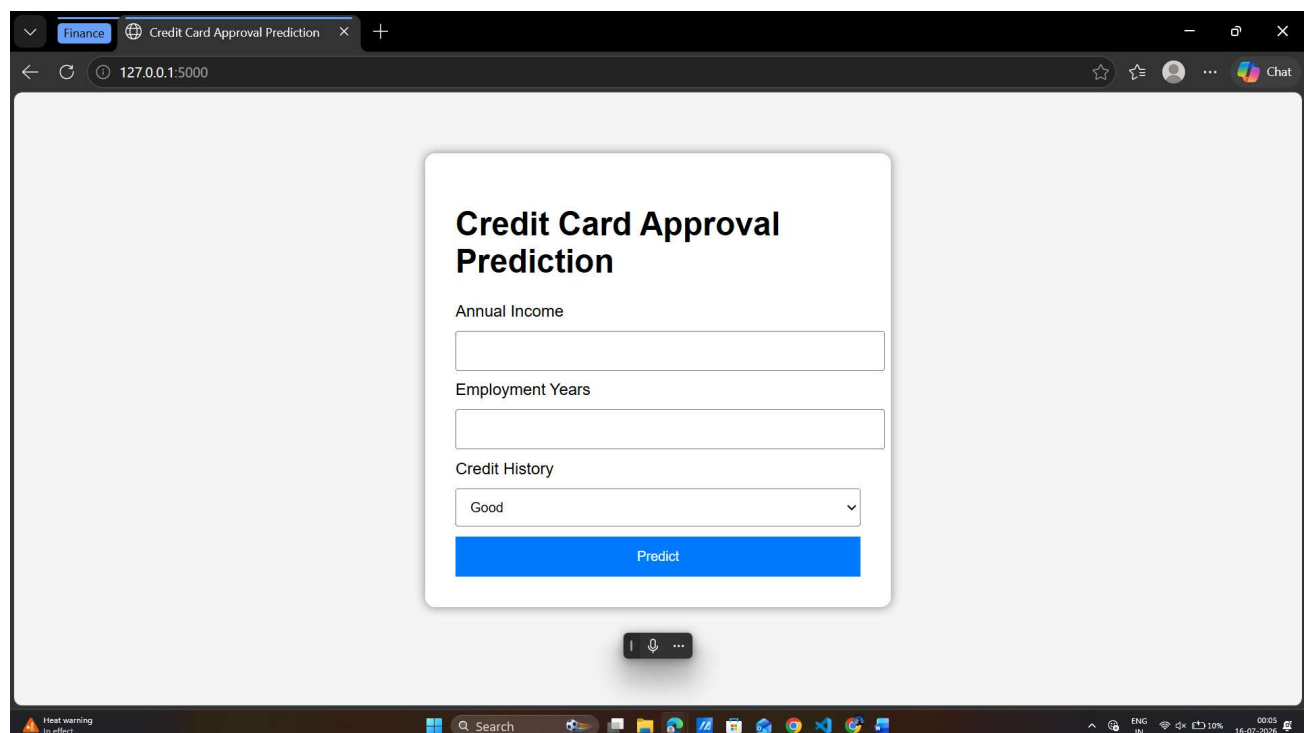

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	~1 second	Pass	Fast local response
2	Response Time (Max)	< 5 seconds	~2 seconds	Pass	Within acceptable limit
3	Throughput (Req/sec)	N/A	Normal	Pass	Suitable for local testing
4	Error Rate	< 1%	0%	Pass	No errors during testing
5	CPU Utilization	< 80%	~20%	Pass	Low CPU usage
6	Memory Utilization	< 80%	~25%	Pass	Stable memory usage

Step 4: Observations & Analysis

The Flask application was tested on a local machine. The home page loaded successfully, prediction requests were processed without errors, and the application responded quickly. CPU and memory usage remained low during testing, indicating stable performance for a single-user environment.

Step 5: Screenshots / Evidence
