

Project Executable Files

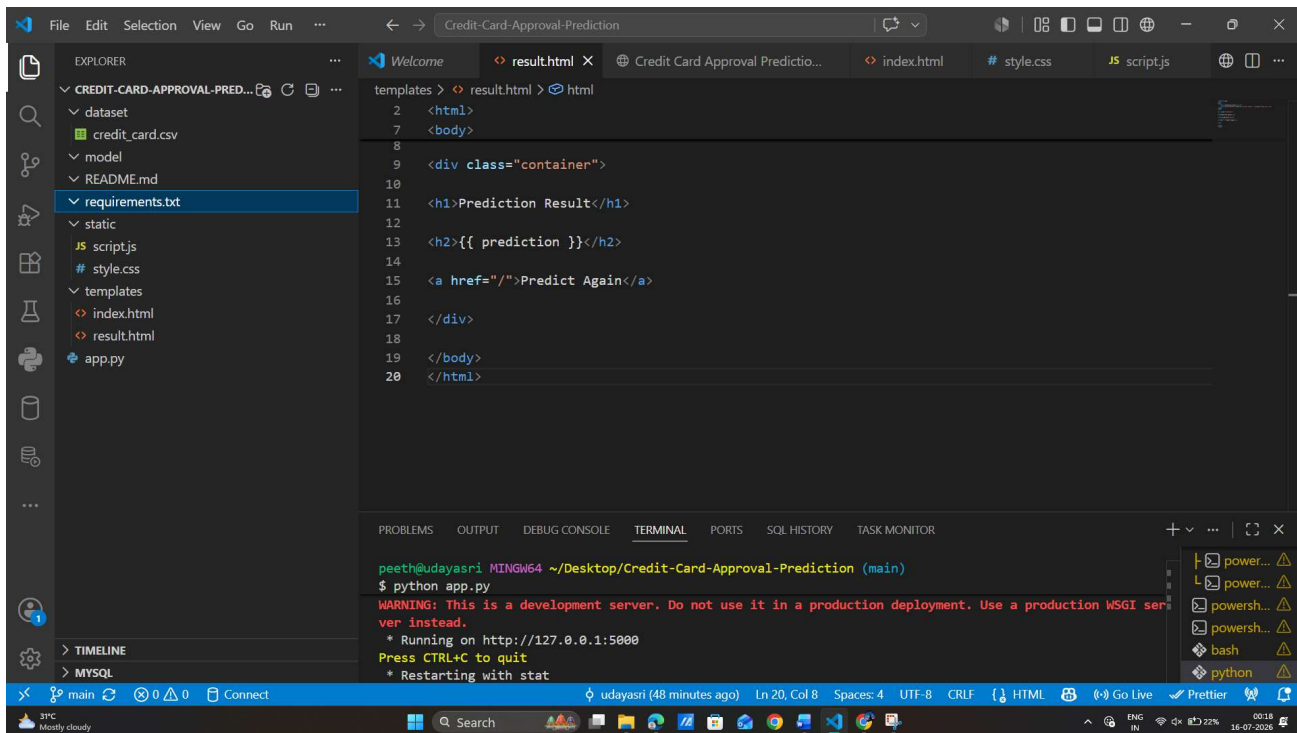

Date	15 March 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	NO
10	Demo video or walkthrough (if required)	

Step 2: File / Folder Structure

The screenshot shows the VS Code interface for a project named 'Credit-Card-Approval-Prediction'. The Explorer panel on the left shows the following structure:

- CREDIT-CARD-APPROVAL-PRED...
 - dataset
 - credit_card.csv
 - model
 - README.md
 - requirements.txt
 - static
 - script.js
 - style.css
 - templates
 - index.html
 - result.html
 - app.py

The main editor shows the content of `result.html`:

```

1 <html>
2 <body>
3
4 <div class="container">
5
6 <h1>Prediction Result</h1>
7
8 <h2>{{ prediction }}</h2>
9
10 <a href="/">Predict Again</a>
11
12 </div>
13
14 </body>
15
16 </html>

```

The terminal at the bottom shows the command `python app.py` being executed, resulting in a warning about using a development server and the application running on `http://127.0.0.1:5000`.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Runs Locally)
LoginCredentials (Demo)	Not Required
Platform / Hosting Provider	Local Flask Development Server
Repository Link	https://github.com/Udayasri138/Credit-Card-Approval-Prediction
Demo Video Link	https://drive.google.com/file/d/1zW7ygrejnzRI7JcLpTh7ZIF3FrdVkp/view?usp=drivesdk

Step 4: Run Instructions

1. **Install Python** (Version 3.12 or above) on your system.
2. **Download or Clone the Project** from the GitHub repository:

```
git clone https://github.com/Udayasri138/Credit-Card-Approval-Prediction.git
```

3. **Open the Project** in Visual Studio Code.
4. **Open the Terminal** in the project folder.
5. **Install the Required Dependency** by running:

```
pip install flask
```

6. **Run the Application** using the command:

```
python app.py
```

7. **Open a Web Browser** and visit:

```
http://127.0.0.1:5000
```

8. **Enter Applicant Details** such as Annual Income, Employment Years, and Credit History.
9. Click the **Predict** button to view the **Credit Card Approval Prediction** result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application is not deployed online.	Runs successfully on the local Flask server.
2	Uses basic prediction logic instead of a trained ML model.	Can be upgraded by integrating a trained Scikit-learn/XGBoost model.
3	No database or user authentication.	Can be added in future versions using MySQL and Flask Login.
